

Connect workers. Automate workflows.

The all-in-one platform to optimize electronics production operations.

Workerbase turns static procedures into adaptive workflows for better quality, reliability and productivity.

Workerbase is the Connected Worker platform that helps you collect and truly understand production data, letting you streamline workflows and automatically coordinate work.

- ✓ Manage all process disruptions on the shop floor in real-time
- ✓ Seamlessly integrate with your existing ERP, MES and machines
- ✓ Customize workflows to match the way you work
- ✓ Add the missing layer of flexibility to your ERP and MES systems

Cut scrap and rework rates to save costs

See what's happening on the shopfloor real-time to anticipate issues and address challenges before they start costing your business.

Inject flexibility into your production operations

Efficient digital workflows that instantly adapt to the ups-and-downs that every production experiences instead of static, paper-based manufacturing procedures.

Quickly train, re-skill and cross-train frontline staff

Attract new talent, retain your best employees, and overcome knowledge and skills gaps by empowering your workforce with powerful Connected Worker apps.

Transform documents into work instructions

Turn wasteful, paper-based work instructions into actionable and adaptable instructions with a click of a button.

All the features you need to run data-driven production operations

Machine changeover

Digital, step-by-step instructions and smart resource allocation to minimize changeover times by parallelizing activities

Clean, Inspect, Lubricate checklists

Prevent major breakdowns and cut maintenance costs by detecting abnormalities early on

Safety checklists

Foster safe work procedures by observing routine tasks, providing timely feedback, and analyzing the root cause of unsafe acts

Forklift coordination

Digitise forklift requests and leverage data to improve the material management process

Visual quality inspection

Give visual feedback about, and automatically detect, missing parts. Import information into your existing quality management system

Machine data collection

Get full transparency with real-time data, delivered in actionable insights for continuous improvement

Inline quality inspection

Mobile devices allow just-in-time quality approvals to identify defects as early as possible

Quality data collection

Measure and track first pass yield along your value chain, ensuring process compliance with digital operating procedures

Incoming goods checklist

Provide digital lists of items that need to be checked and trigger CAPA processes in case of deviation

Integration to all production systems

Bring to ERP, MES, and other standardized systems the necessary layer of flexibility to make them work for the shopfloor

About us

Leading manufacturing companies worldwide are using our Connected Worker platform in their 24/7 production environments to save costs, increase throughput and improve worker productivity.

We are a fast-growing, Munich-based technology company backed by a \$12.5 million venture capital investment. Whether you're looking at connecting frontline workers for the first time, injecting flexibility into your production operations, or exploring new ways to optimize your production efforts with AI - Workerbase supports you along your entire digital transformation journey.

"Workerbase makes the whole shopfloor more dynamic, more agile. We are much quicker in reacting to the ups and downs every production has."

Paul Mairl
CDO, GKN PM
